Findings

Distraction Index (DI): Right DI = 0.24, Left DI = 0.26.

Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**

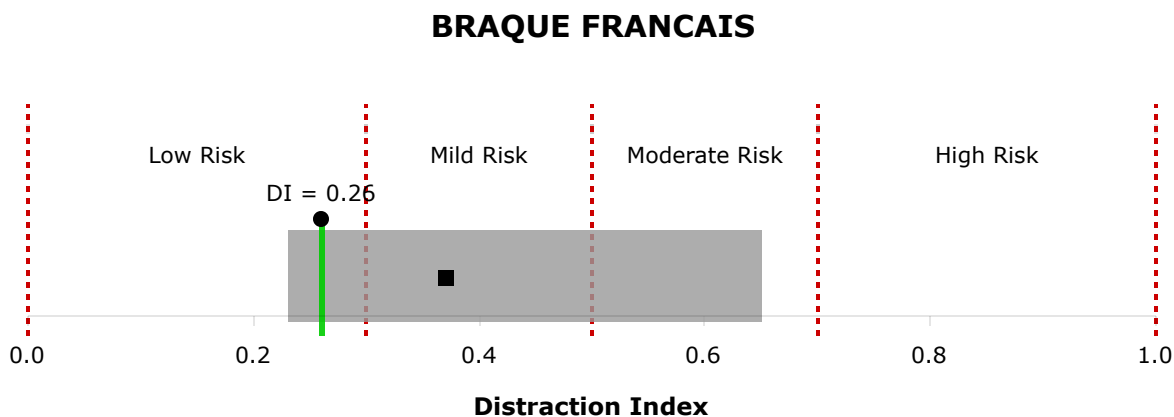

Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.26.

OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.

Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 33 canine patients of the BRAQUE FRANCAIS breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.23 - 0.65) for the breed. The breed average DI is 0.37 (solid square). The patient DI is the solid circle (0.26).

SUMMARY: The degree of laxity (DI = 0.26) falls within the central 90% range of DIs for the breed. This amount of hip laxity places hip at a minimal risk to develop hip OA. **No radiographic evidence of OA for either hip.**
